

CoverTec

Best Marks for Technology, Function and Design.

Announcing CoverTec: the new range of surface-enhanced structured-core panels from TRIPLEX. A duet of technology and beauty in concert, CoverTec lets you think in totally new dimensions in terms of the image projected by packaging and its technical performance. Wherever structured-core panels are used, CoverTec surfaces open up a multitude of new options in terms of design, visual appearance and product presentation.

CoverTec "SlideStop"

Holds Products in Place During Transport

"SlideStop" is a supporting surface for products which must be prevented from shifting or sliding during transport. Fully recyclable, it consists of a slide-resistant covering film securely welded over a structured-core base – combining the softness of an elastic mat with the outstanding physical strength of the TRIPLEX structured-core panel. It is ideal for simple and problem-free transport of products made of glass, plexiglass, stainless steel, porcelain, etc. which are sensitive to impact damage resulting from sliding.

CoverTec "Soft&Smooth"

Secure Protection with Non-Woven Fabric and Foam

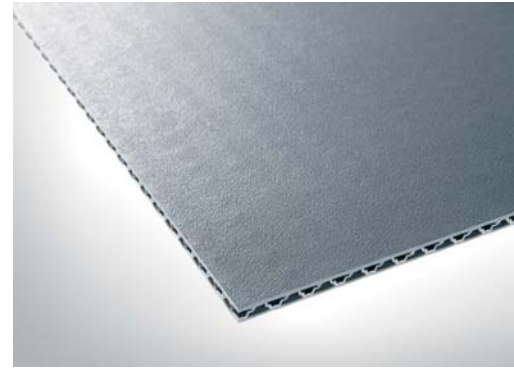

This panel's cemented or welded non-woven fabric surface protects extremely sensitive objects (e.g. decorative lacquers or other highly glossy surfaces) from scratching due to dirt and dust particles in transport. The laminated foam layer contours to even the most irregular shapes, surrounding the packaged product and keeping it firmly in place.

CoverTec "Grained"

The Practical Showcase for Technical Products

CoverTec "Grained" packaging is used for a wide variety of high-quality products including technical meters and musical instruments. It provides a good-looking and pleasant-to-touch grained surface that reflects the value of the goods inside. The surface texturing has an interesting feel to it and is not sensitive to scratching and dirt accumulation.

CoverTec "Skin"

Design and Presentation for any Occasion

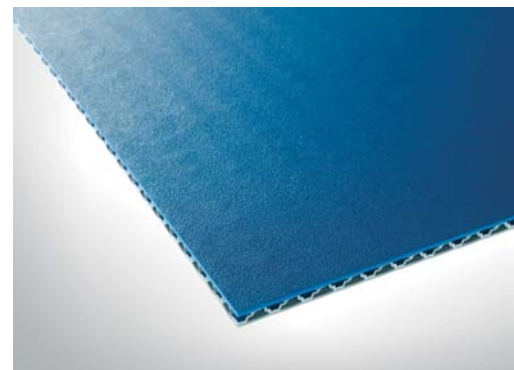

CoverTec "Skin" surfaces are specifically designed to personify or virtually project an object, service or brand. CoverTec "Skin" with a wood, cork or stone (marble) decorative finish provides a highly personalized touch for interior panels and components, e.g. in camper vans. Structured-core panels surfaced with materials such as fabric or artificial leather have a distinctive first-class appearance.

CoverTec "Colour"

Very Expressive – Very Noticeable

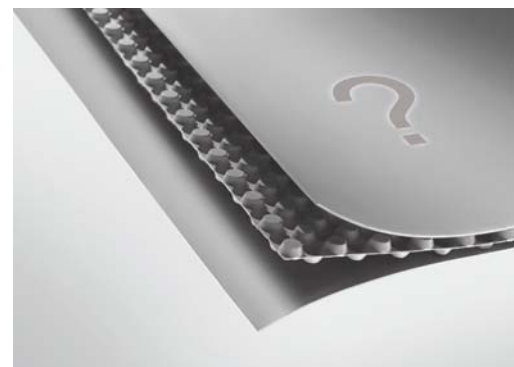

A top-quality, striking appearance is presented by structured-core panels in two colours – for example grey on the lower side and signal blue on the upper side in accordance with corporate design specifications. Your imagination is the only limit for the designs and combinations used. The colour desired is created by a thin coloured film welded onto the panel surface; both the film and the panel are fully recyclable.

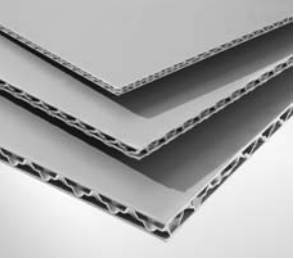

CoverTec "Option"

Your Wish is Our Command

Wherever and however you use TRIPLEX structured-core panels and their various CoverTec versions in your logistics and manufacturing processes, our packaging experts and design artists can help you do so in the best possible way. Let us create your very own CoverTec "Option": a tailor-made version personalized to your exact requirements.

Our Promise

At TRIPLEX, we focus on coming up with new, surprising ideas – today we're thinking about your requirements for tomorrow. In looking for new ways to solve your problems, we are not afraid to take unconventional paths, relying on imagination for uncommon solutions along with courage to travel uncommon routes. By keeping our eyes open and constantly learning more, we break through barriers and set new standards. True to our roots as a family-owned company, we listen exactly to what you have to say and attach utmost importance to fairness in our business relationships. At TRIPLEX, our employees, customers and suppliers are fully committed with their hearts and their minds and work together as partners.
