

## QuickSnap

The rapid, one-handed closure with no additional parts

The QuickSnap closure – it locks fast, can be used with one hand and is sustainable because it is formed from a TRIPLEX structured-core panel, with no need for any additional components. It is not system-dependent and can be integrated directly into TRIPLEX pallet enclosures and sleeves.

## Easy to use and sustainable

QuickSnap is the name of this light and intuitive one-handed closure. Simply grab the unloading flap in the centre with one hand and pull it out to open or press it in to close.

QuickSnap is made from the same material as the pallet enclosure and is directly integrated into it, meaning no additional parts are necessary. It also exhibits the same outstanding properties as the high-quality TRIPLEX structured-core panels, which is particularly important when it comes to weather and moisture resistance. QuickSnap seals the side walls completely, ensuring water and dirt can't penetrate the enclosure. Its durability has been thoroughly tested, with results showing that QuickSnap does not exhibit material fatigue. Since the closure is not an additional material, end-of-life recycling for the pallet enclosure is more straightforward than it otherwise would be.

The QuickSnap closure is protected by a registered design, meaning only TRIPLEX customers can benefit from its advantages. QuickSnap is not system-dependent and can therefore be integrated into any enclosure or sleeve made from TRIPLEX 10/3000 g/m<sup>2</sup> structured-core panels.

Detailed information about TRIPLEX pallet enclosures and locking systems is available at [www.triplex.de](http://www.triplex.de)

### QuickSnap in brief

- Extremely simple one-handed action
- Totally intuitive handling
- No need for additional components or spare parts
- Keeps water and dirt out
- Not system-dependent and suitable for integration into any enclosure or sleeve made from TRIPLEX 10/3000 g/m<sup>2</sup>
- No material fatigue
- Ultra-simple recycling
